Experience

Microsoft — Software Engineer II — Redmond

Feb 2023 – Present

Microsoft Purview (Data Loss Prevention) - ML Inferencing Service & Data Classification Service

- **ML Modeling & Inference:** Reduced misclassifications by 30% in regex-based Exact Identity Match by designing and deploying a contextual ML layer leveraging transformer-based semantic embeddings, enabling the system to capture entity context beyond simple regex patterns.
- Expanded international ML coverage by enabling Bring Your Own Model (BYOM) support for non-English languages with multilingual embeddings and language-specific tokenization, extending model usability to additional enterprise clients.
- **Product Growth & Enterprise Compliance:** Analyzed Copilot compliance workflow engagement and usage metrics to identify growth opportunities, influencing roadmap priorities and driving 15% trial-to-enterprise conversion.
- Designed and implemented end-to-end Customer-Managed Key (CMK) integration for over ten thousand high-security enterprise customers, enabling instant data access revocation and enterprise-grade protection. Contributed to DCS compliance features by implementing policy-driven exception handling and action enforcement, reducing manual intervention by 20%.
- **Production Reliability & Scalability:** Owned synthetic health monitoring service for API health checks. Implemented dynamic capacity scaling policies using Azure Kubernetes autoscaling and container orchestration, optimizing resource utilization while maintaining 99.99% service availability and achieving \$7M cost savings over two years.

Independent Project — Diffusion-based Video Generation

Nov 2025 – Present

- Built node-based workflow pipelines using ComfyUI to orchestrate multimodal video generation, incorporating LoRA adaptation for model fine-tuning.
- Developed a web application and backend to serve end-to-end multimodal (image- and audio-conditioned) video generation.

Applied Machine Learning Research — Research Assistant

• **Georgia Institute of Technology, SocWeb Lab** — Atlanta

Aug 2022 – Dec 2022

Built time-series forecasting models for mental health risk using Pandas, scikit-learn, tsfresh with IPRCE Emory.

Applied ML models (DecisionTree, RandomForest, GradientBoosting) to wearable health data, predicting workers' performance and stress level with Nokia Bell Labs.

• **Fordham University, Color AI Lab** — New York

Aug 2018 – Jul 2019

Developed a K-means++ color clustering approach for fashion image analysis and deployed a full-stack clothing recognition system (Django, PostgreSQL, TypeScript); featured in Shanghai Fashion Week.

Microsoft — Software Engineer Intern — Shanghai & Redmond

2020 – Aug 2022

- Migrated text-classification services to AKS; containerized with Docker and implemented DNS & Kubernetes load balancer, reducing operational costs and latency by 50 %.
- Implemented RBAC and managed identities across CosmosDB, Redis, and messaging services.
- Owned notification services for learn.microsoft.com with zero live-site incidents.

Yoke Intelligence — Computer Vision Engineer Intern

Dec 2018 – Jul 2019

- Developed face detection and employee heatmap system for Commercial Aircraft Corporation of China (COMAC), enabling automated attendance and visualization of high-occupancy areas.

Skills

Languages: Java, C#, Python, SQL, C++, TypeScript, JavaScript

Frameworks: Docker, Azure, Kubernetes, Spring Boot, Angular, Django

AI/ML Tools: Caffe, PyTorch, MCP

Education

M.S. Computer Science (Machine Learning Track)

Aug 2021 – Dec 2022

Georgia Institute of Technology, Atlanta, GA

B.Eng. Electronic Information Engineering

Sep 2015 – Jun 2019

ShanghaiTech University, Shanghai, China

Publications

- **Structured Outputs in Prompt Engineering: Enhancing LLM Adaptability on Counterintuitive Instructions;**First Author, published in AACL-IJCNLP 2025
- **Leveraging Social Media to Predict COVID-induced Disruptions to Mental Wellbeing among University Students:Pilot Study;** Second Author, published in JMIR Formative Research 2024
- **Finding Real-life Doppelgängers on Campus with MTCNN and CNN-based Face Recognition;**First Author, published in Smart Business: Technology and Data Enabled Innovative Business Models and Practices
